Survive The Great Inflation

Synopsis

Emperor Bernanke Has No Clothes - Michael Murphy Is Calling Him Out Everyone is worried about what's going on with the economy. The Powers That Be continue to frantically give away huge piles of taxpayer money to get the US moving again and they're not willing to see that the bridge in the direction they're heading has collapsed. Investment expert Michael Murphy, however, is doing what few seem willing to do: He's calling a spade a spade, dispassionately laying out the numbers and building a solid case for what is going to happen next in the US and world financial environments. (Hint: It's big and it's bad!) But it doesn't have to be bad for you. Why? Because after Murphy tells the hard-to-swallow truth, he presents easy-to-follow instructions on how to protect your assets, your family, and your future when the shift hits the fan. Murphy was one of a very small group that sounded the warning on the real estate collapse and the government's costly, ineffective response. He navigated his newsletter subscribers through the mess to a documented 148.5% gain in 2009, and continues to outperform the markets in 2010. And while most of that small group are now predicting deflation, *Survive the Great Inflation* gives you an abundance of facts, figures, charts and graphs to prove deflation is not the problem. It is high inflation that will demolish most people's finances and retirement if they haven't planned for it. Past government performance is no guarantee of avoiding future stupidity. In fact, maybe it's a formula for assuring it. You need to get a clear view of what's happening now and the exact moves you need to make that will allow you to prepare for and prosper through what's coming, no matter how extreme. That's nothing less than what *Survive the Great Inflation* has to offer.

Customer Reviews

Mr. Murphy graduated Harvard cum laude with a degree in economics. He has spent his life making very successful prognostications about this generation's transformative technology: the digital revolution. As such he views our current economic morass from a perspective that qualifies him to opine on what the government should and shouldn't do to deal with our economic situation in the digital age. He presents a very persuasive argument of why we are headed for a great inflationary period (perhaps a dreaded hyperinflation) and what the government should do to avoid it and how you can protect yourself and those you love from the government's failure. In five parts, Murphy discusses: 1) whether we are headed for inflation or (as some maintain) deflation; 2) the 3 deflationary forces which our government cannot fight, indeed may not even recognize; 3) how our government in general (and Ben Bernanke in particular) is attacking these forces with the wrong tools; 4) what the government should do, but won't; and what you should do to survive and perhaps thrive in the great inflation ahead. In the first part, Murphy looks at the reasons why some say we are headed for deflation and explains at every point why they are wrong. Inflation is not just higher prices--it is at its essence decreased purchasing power. Ben Bernanke and our government fear deflation so much that they are doing all they can to create money and to cushion the effects of the housing and credit busts. Rather than riding out the deflation, they are on the road to devaluing the dollar so much that its value as fiat currency is in danger of falling off the razor thin path from a slow loss of value (normal inflation) over the edge into worthless paper.
