Age Range: 8 and up

Grade Level: 3 and up

Customer Reviews

This is two books of worksheets, including Assessments, grading charts, and drills. It's a LOT of pages. It is really required for this program, and is totally worth buying. The other thing you really need is the Teacher's manual, which is spiral bound & crazy-thick. It is also really worth it. I think I bought mine on ebay for around \$30. The Meeting book, in my opinion, was not really necessary & was certainly not worth the \$15 I paid. It was very thin & mostly just a fill-in-yourself calendar, a number line (the zig-zag kind), and a birthday chart. All of those things you can easily find online for free. But this set is really required. I was skeptical because I really don't like scripted curricula, generally speaking. I'm more a fly-by-the-seat, let's see where this takes us kinda homeschooler. We started with Math-U-See, then we tried various compiled materials, an online program called Dreambox (which he loved at first, but then grew to hate), and then I bought the Saxon and the Singapore book (sort of accidentally). I thought Singapore would be the one, but we both felt like we weren't getting anywhere- there wasn't any learning being done. So, I decided to try the Saxon, since I had the main book anyway. I bought this (which is essential & worth the money), and the Meeting book (which I could totally have skipped & wasn't worth the \$15 I paid).
